This is an example of the way that the foldable should be cut so that it folds correctly. **The actual foldable does not have the "cut lines" drawn on it.** I have found that some students need the cut lines drawn, which I do with a pencil prior to making copies. The foldable is formatted (as a PDF) to print correctly as a double sided document. NOTE: to ensure that the graph (on the other side) prints clearly, it is best to set the copier/printer to print in "best quality" or "high quality". The copier I use at work has a "graphics" setting which makes the graph perfectly clear.
